SENIOR BACK-END DEVELOPER

ABOUT HOUSEME

HouseME is one of South Africa's most promising tech start-ups. It is disrupting the rental property industry by providing tenants and landlords a digital platform through which to find and manage properties, at a fraction of the cost of traditional agencies.

Our work environment is open, friendly and collaborative. We value ideas over unnecessary bureaucracy so encourage transparency and communication across the board. At the end of the day, you will be part of a family that works hard towards our ambitious goal of redefining the rental space.

What are we looking for?

- 3+ years of back-end development experience (preferably C#)
- Experience with cloud services such as Microsoft Azure, Google Cloud Services, AWS
- Experience with continuous deployment processes and associated technologies such as Git, Git flow, Buddy Build, Ansible etc
- Experience in writing clean and well understood code
- Experience with integration and unit tests
- A problem-solver with positive attitude
- Keen willingness to learn and adapt
- Start-up mentality and belief in the HouseME vision

Bonus points

- Experience with CQRS/ES systems
- Experience with identity services and oAuth 2.0
- Experience with a service-oriented architecture / distributed systems and associated technologies e,g Docker, Kubernetes
- Experience with .NET Core

What you get

- Leading the change in industry - directly contribute to the strategy and product direction as we lead the property industry's adoption of technology.
- Startup business knowledge and networks - have the opportunity to share in the learnings and triumphs of HouseME, and participate in the various events in Cape Town's startup ecosystem; help improve your skills outside of tech.
- Flexible work hours - whether you are a morning or evening person, we will accommodate you as well as find ways to support your interests (e.g. machine learning, design etc.).
- Opportunity to develop as a mentor, helping your junior colleagues grow as professionals.
- Shaping a young product - as the product is still in its early stage, your changes will be noticed and you will have a big impact on the directions we take.
- Working on a modern and evolving stack (Hooks, Jest, Material-UI, ES7, GraphQL).
